Education

York University — Toronto, ON

Bachelor of Science in Computer Science — *Apr. 2028 (Expected)*

- **GPA: 3.73/4.00**
- **Relevant Courses:** Software Design, Operating Systems, Computer Networking, Data Structures & Algorithms, Object-Oriented Programming in Java.

Experience

IT Mobile QA Tester (Intern) — Toronto, Canada

FGF Brands/Cerebro — *Jan 2026 – Present*

- Investigate **data inconsistency issues** by tracing behavior across **frontend interactions and API responses**, enabling faster **root-cause identification**.
- Support release cycles by **reproducing defects**, providing logs and environment context, and **verifying fixes through regression testing**.
- Responsible for pre-release validation of an internal **Android enterprise application**, performing functional, regression, and configuration-based testing prior to production deployment.
- Create and maintain structured **test plans in Azure DevOps**, covering feature flows, edge cases, and release-readiness scenarios across builds.
- Develop **API integration test collections in Postman** to validate backend responses, feature configurations, and data consistency beyond the UI layer.

Research Assistant & Programmer — Toronto, Canada

York University – Social Robotics Lab — *May 2025 – Sep 2025*

- Built a **Python/Selenium automation pipeline** to upload lessons to the robot's online platform, removing a **5-hour manual step** that was repeated **5–6 times** during development.
- Developed an **automation bot** for a team communication platform to coordinate **about 30 trial sessions**, assign participants, and issue **about 60 reminders** through the platform's calendar and notification system.
- Implemented **webhook integrations** delivering **about 30 real-time booking alerts** and forwarding relevant emails to improve team awareness.
- Built a **ROS2 node** to control a vibration motor, contributing to updated robot interaction behaviours.
- Diagnosed and reported a **Raspberry Pi imager bug** while configuring **Linux/Ubuntu** and Raspberry Pi environments and resolving **SSH** connectivity issues.

Lead Research Assistant — Toronto, Canada

York University – Social Robotics Lab — *May 2024 – Sep. 2024*

- Supervised and trained a team of **seven volunteers** supporting student learning sessions with the Abii **educational robot**.
- Created the **digital feedback form** used to collect participant responses for ongoing research.
- Supported **20–30 student sessions** by preparing materials and ensuring smooth execution.
- Recognized for **initiative and professionalism**; recommended for a Teaching Assistant position.

Projects

Smart Travel Planner — Team Lead — Toronto, ON

Software Design Course, York University — *Fall 2025 – Dec 2025*

- Led a **five-person team** as **Project Manager** and **Scrum Master** to develop a cross-platform travel-planning application using **Kotlin Multiplatform** and **Compose Multiplatform**.
- Implemented **multi-level navigation** using **Decompose**, including one primary Trip View and **four sub-flows** (Add Event, Add Member, Edit Event, Edit Trip).
- Built a **location-autocomplete** feature and integrated **geocoding** so all events automatically attach geographic coordinates for map rendering.
- Contributed to **event-creation workflows** and integrated **UI–domain–data layers** for consistent state management.
- Managed **sprint planning**, **backlog refinement**, and team coordination to maintain development progress.

Technical Skills

Programming: Kotlin, Python, Java, JavaScript, SQL, MongoDB, Bash/Zsh
Libraries & Frameworks: Kotlin Multiplatform, Compose Multiplatform, Android, Espresso/Compose Testing, REST APIs, Flask, Express, React, Next.js, Decompose, Ktor, Mapbox API
Tools: Docker, Git, GitHub Actions (CI/CD), Selenium, Jira, SSH, Figma
